RESPONSE TO AMENDMENT

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

1. Claims 1-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Joseph Rubinfeld et al "Structure and Performance Property Relations of Straight Chain Alkyl benzenes" is withdrawn in view of applicant's remarks.

Art Unit: 1751

Claims 1-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over J.L.G. de Almeida et al "Linear Alkyl benzene" is withdrawn in view of applicant's remarks.

New grounds of rejection

Claims 1-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feierstein et al (4,162,236).

Feierstein et al disclose a detergent composition comprising alkyl benzene sulfonates having 12 or more carbon atoms having a 2 phenyl content of greater than 60% by weight of the total 2-phenyl. Furthermore, said reference teaches the use of hydrogen fluoride catalyst and vacuum pressure to facilitate the alkylation reaction (col. 2, lines 1-66). Feierstein et al further teach the inclusion of additional components such as builders, fillers, and other surfactants (col. 3-col. 4). See examples for specific processes.

Feierstein et al teach all of the instantly required except a specific teaching in the examples of the specific 2-phenyl alkylbenzene sulfonate and other detergent ingredients. However, it would have been obvious to one of ordinary skill in the art to combine the components as described to exemplify the claimed composition because each of the components are taught and required in a single composition and the artisan of ordinary skill in the art would have been motivated to combine the component in the absence a showing to the contrary. Moreover, it is held that non-preferred embodiments can be indicative of obviousness.
